

# Vanguard® ID Total Knee

Individualized Design Made Simple

# Individualized Design Made Simple

**Unlike any other TKA construct on the market today,** Vanguard ID (Individualized Design) allows the surgeon to combine independent bearings of varying thickness and constraint, facilitating personalized fit while minimizing soft tissue releases. With its ability to meet the individual requirements of the medial and lateral compartments, the Vanguard ID Knee is expanding what's possible in TKA.

The Vanguard ID Knee is the modern interpretation of a historic concept in knee design: total knee arthroplasty should be considered a soft tissue operation. Recognizing the importance of soft tissue preservation, Zimmer Biomet continues to offer surgeons **surgical simplicity** while emphasizing the preservation of the patient's unique soft tissue envelope.

### **Flexible Options**

Cruciate stemmed tibial trays are compatible with all bearing constraint options.

### **Individualized Fit**

Utilizing the Vanguard XP® Knee System's independent CR and AS bearings, available in 1 mm increments, the ID achieves ligament balance tailored to patient's unique anatomy.

### **Versatile Design**

Innate surgical flexibility allows surgeons to mix and match bearing articulations and thicknesses (up to 2 mm) to accommodate the patient's unique soft tissue envelope.
